

Refinement of the AC Generation

EMD SD70MAC, SD80MAC, and SD90/43MAC locomotives

EMD's 'MAC' series of AC locomotives, most commonly known as the SD70MAC, SD80MAC, and SD90/43MAC are among the most powerful locomotives ever put to rails, with the three locomotives putting an earth-rumbling 13,300 combined horsepower beneath their HTRC radial self-steering trucks.

Kato is re-releasing the MAC triumvirate just in time for the new year, giving modelers the opportunity to put these powerhouse locomotives to work on their own layouts! Set them at the front of a long train of coal cars or any other freight cars and they'll motor onward with all the power and mechanical precision of their full-scale counterparts.

Kato's EMD SD70MAC, SD80MAC, and SD90/43MAC locos are fully detailed and driven by a powerful five-pole motor equipped with dual brass flywheels for realistic motion and high tractive effort. All-wheel electrical pickup and crisp detailing will make these locomotives some of the best running and nicest looking freight units on your layout.
