EMD SD40-2 Mid-Production BNSF "Swoosh"

Precise Detailing

The Kato EMD SD40-2 Mid-Production is more than just an HO locomotive; it's a precisely crafted replica of its real world counterpart, matching every inch of the 1:1 scale working model in every detail. From the roof mounted Air Conditioner, to its crisply molded walkway tread, reinforced anti-climber and working deck mounted ditch lights, the BNSF SD40-2 Mid-Production version is accuracy redefined.

Bold New Look

The BNSF Railroad is currently repainting its motive fleets with a brand new paint scheme to honor its 10th anniversary as the combined Burlington Northern and Santa Fe railroad; the striking "Swoosh", or "H3" as it's sometimes called, paint scheme is an updated version of the traditional BNSF Heritage paint scheme featuring a modern-styled logo to celebrate the mix of both old and new.

- Ready-to-Run with all details factory installed
- Operational Ditch Lights which can be run in blinking or steady modes in both Analog (DC) and DCC operation
- Powerful, re-designed drive mechanism and electrical pickup system
- DCC + Sound Friendly Mechanism
