

“The most talked about train in the country”

The “California Zephyr” — Memories

Kato brings you more memories of the *California Zephyr*; take a ride on a train of imagination and picture some of the things this great train was known for. The *Zephyr* was a long, stainless steel train with dome cars designed to provide a magnificent view of the varied expanses of prairies, mountains and deserts that would stretch out around you. The dining car was lavishly stocked with fine linen, quality silverware, and a friendly staff, while the observation car would allow you to gaze on small towns and large cities alike as they would fade into the distance. Picture yourself in one of the coach cars, relaxing in a large reclining seat while a “Zephyrette” brings you an extra pillow, or perhaps even enjoying your own private room in one of the Pullman cars.

As you look at this model of the *California Zephyr*, picture the train as it pulled out of Denver and began its ascent into the Rocky Mountains, through the many tunnels and alongside the rivers that snaked through landscape. Perhaps you are a passenger, watching trout fisherman on the riverbanks or rafters braving the currents of the Colorado River from the comfort and panoramic view of one of the *Zephyr's* dome cars.

Kato's California Zephyr is an exact model of this memorable train as well as the locomotives which ran it, with individually detailed and molded cars, no single one alike, and accurate car names. CB&Q (Chicago to Denver), the Rio Grande (Denver to Salt Lake City), and the Western Pacific (Salt Lake City to San Francisco) F3 units are all available for any leg of the trip. Display this model or operate it on your very own layout and enjoy the memories...

The *California Zephyr* set features all new car names and numbers, blackened low-profile wheels, shock absorber construction, Kato semi-automatic knuckle couplers, and illuminated tail sign, tail light, and red marker lights. Each set additionally includes UNITRACK for display. Car interiors can be lighted with the optional installation of 11-209 or 11-210 Interior Light Kit with LED. The F3 locomotives feature DCC-friendly mechanisms, directional LED headlights on A units, and Kato magnetic knuckle couplers.
