

# 50th Anniversary of KATO N-gauge Models

Advancements in Technologies for N-gauge Railroad Model Production  
in the last Five Decades

*The book is dedicated to Yuji Kato,  
the founder and chairman emeritus of Sekisui Kinzoku,  
who passed away in November, 2014*

*English translation of captions*

# CONTENTS

	<i>Page no. book</i>
<b>To All of you who love Railroads and Model Railroading</b>	<b>2</b>
	<i>Kato, Hiroshi</i>
	President of Sekisui Kinzoku, Co., Ltd.
Looking Back at 50 Years of Progress in N-Gauge Production	4
	<i>Kato, Yuji</i>
	Founder and chairperson emeritus of Sekisui Kinzoku Co., Ltd.
Congratulatory Address	5
	<i>Miyata, Ryohei</i>
Congratulatory Address	6
	<i>Ogata, Masaki</i>
Congratulatory Address	7
	<i>Furukawa, Susumu</i>
<b>Chapter 1. EARLY PRODUCTS BY SEKISUI KINZOKU</b>	<b>12</b>
	<i>Ohta, Haruhiko</i>
1.1 The First Item by Sekisui Kinzoku, the JNR Steam Locomotive Type C50, and Its Variations	12
1.2 The Earliest Production of the JNR Passenger Coach OHA 31 and its Variations	14
1.3 Early Products of the JNR Commuter Electric Train, Series 103, and Their Variations	15
1.4 Early Products of the JNR Alternative-Current Electric Locomotive EF70 and Its Variations	16
1.5 Early Products of the JNR Passenger Cars and Freight Cars	18
1.6 Early Products of the JNR Direct-current Electric Locomotive EF65 500 and Diesel Car KIIHA 20	19
1.7 The First Products of US Prototypes, PA-1 Diesel Locomotive and J3a Steam Locomotive	19
1.8 Early Products of Japanese Prototype Models Finished in Color Schemes of US Road Names	20
1.9 Early Products of Tracks and Other Items	21
<b>Chapter 2. RECENT PRODUCTS BY SEKISUI KINZOKU/ KATO</b>	<b>22</b>
	<i>Seki, Ryotaro</i>
2.1 Models of JNR & JR Prototype	22
1.1 JNR Steam locomotive Type C50, the main memorial item of KATO's N-gauge 50th anniversary	22
1.2 JNR Steam locomotive Type C12	24
1.3 JNR Steam locomotive Type C59 postwar style and Express "Aki" composed of series 10 passenger coaches	25
1.4 Variations of the JNR steam locomotive Type D51	26
1.5 JNR Old direct-current electric locomotives	27
1.6 Variations of the JR electric locomotive Type EF510	28
1.7 "Sherpas of the mountain pass", JNR electric locomotives operated along steep lines in "Usui" and "Itaya" hills in the past	28
1.8 The nostalgic world of the "Iida" line	30
1.9 The beautiful streamliners, Series E5, E6 and E7 "Shinkansen" super express trains, operated by the East Japan Railway Company	32
1.10 Color variations of the Series E233 direct-current commuter electric trains operated by the East Japan Railway Company	33
2.2 Models of Private Railway Prototype	34
2.1 Kintetsu Corporation, Series 10100 "New Vista Car" limited express train	34
2.2 Odakyu Electric Railway, Type 3100 NSE "Romans Car" limited express train	34
2.3 Seibu Railway, Series 5000 "Red Arrow" limited express train	34
2.4 Tokyu Corporation, Series 5050-4000 commuter train	35
2.5 Hankyu Railway, Series 9300 commuter train	35
2.6 Seibu Railway, Series 101 commuter train	35
2.7 Keikyu Corporation, Type 2100 commuter train	36
2.8 Color variation of Toyama Light Rail "Portram"	36
2.3 Models of US Prototype	37
3.1 Union Pacific, FEF-3 and "Excursion train"	37
3.2 Southern Pacific, GS-4 and "Morning Daylight" passenger train	37
3.3 Amtrak, "Superliner" passenger train	38
3.4 Amtrak ACS-64 and "Amfleet I" cars	38
2.4 Models of European Prototype	39
4.1 SNCF, TGV electric trains	39
4.2 Rhätische Bahn (RhB), Glacier Express and Bernina Express trains	39
<b>Chapter 3. THE PROCESSES OF MANUFACTURING SEKISUI KINZOKU/ KATO PRODUCTS</b>	
<b>- USING THE EXAMPLE OF THE KEIKYU "DEHA268" DISPLAYED IN FRONT OF THE HEAD OFFICE -</b>	<b>40</b>
	<i>Hashimoto, Yuki</i>
3.1 Design and Preparation Process	40
1.1 Design of products and process	40

1.2	Fabrication and finishing of mold		41
3.2	Production Process		41
2.1	Injection molding		41
2.2	Paint, print and stamp		41
2.3	Production of parts		42
3.3	From Assembly to shipping		43
3.1	Assembly and quality check		43
3.2	Package		43
3.3	Packing		43
3.4	Completion of products and shipping		43
(Column)	The UNITRACK System, One of the Key Items in Supporting the Development of N-gauge Today	<i>Seki, Ryotaro</i>	45
<b>Chapter 4.</b>	<b>THE HISTORY OF SEKISUI KINZOKU / KATO</b>		<b>46</b>
4.1	Early History from Supply of Parts to Production of N-gauge Models	<i>Suzuki, Yasuhiro</i>	46
1.1	Background of Yuji Kato, the founder of "Sekisui Kinzoku"		46
1.2	Young Kato and model railroading before and during World War II		46
1.3	The restart of model railroading as a permanent hobby of Yuji Kato		47
1.4	"Kato Kinzoku" as a family business initiated by parents		47
1.5	Initiation of a home industry "Sekisui Kinzoku"		48
1.6	Yuji Kato, a pioneer of N-gauge models in Japan		49
4.2	ALCO PA-1, An Early HO-scale Handmade Model by Kato Yuji in the Beginning of 1950's	<i>Suzuki, Yasuhiro</i>	50
4.3	Development of SEKISUI KINZOKU/ KATO in the Past Five Decades	<i>Seki, Ryotaro</i>	52
3.1	1965–1974 The first decade – early stages of N-gauge production and the efforts to popularize it –		52
3.2	1975–1984 The second decade – establishment of the N-gauge market which continues to this day –		54
3.3	1985–1994 The third decade – Growth of the N-gauge market and increased capacity of production –		56
3.4	1995–2004 The fourth decade – Steady progression of improvement for N-gauge quality –		58
3.5	2005–2015 The fifth decade – Increased efforts to satisfy the variety of demands from the N-gauge market –		60
<b>Chapter 5.</b>	<b>AN INTERVIEW WITH YUJI KATO AND HIS FAMILY ON THE PRODUCTION OF N-GAUGE MODELS AROUND 50 YEARS AGO</b>		<b>62</b>
5.1	The Story of the Evolution of N-gauge Models in Japan – From Early Challenges until the First Release –		
	- Interview Celebrating KATO's 40th Anniversary of N-gauge Models -	<i>Kato, Yuji/ Natori, Noriyuki</i>	62
(Column)	Track Radius of 200mm as a Non-ignorable Reference for the Design of JNR C50 Steam Locomotive	<i>Ohta, Haruhiko</i>	71
5.2	Memories of Early Days in the Factory of Sekisui Kinzoku		
	- Interview Celebrating KATO's 50th Anniversary of N-gauge Models -	<i>Kunitake, Masayuki/ Kunitake, Terumi/ Kato, Miyoko Natori, Noriyuki/ Ohta, Haruhiko/ Suzuki, Yasuhiro</i>	72
<b>Chapter 6.</b>	<b>DEVELOPMENTS IN MANUFACTURING N-GAUGE MODELS - PROGRESS IN TECHNOLOGY -</b>		<b>78</b>
6.1	Drafting and Design	<i>Naoaki Maiya</i>	78
1.1	Implementation of CAD (Computer Aided Design)		78
1.2	New design and machining systems		79
1.3	New products		79
6.2	Machining of Molds	<i>Ogata, Toshio</i>	80
2.1	Machining in the early days		80
2.2	Progress in machining		80
2.3	Establishment of technology		81
2.4	Machining today		82
6.3	Electric Discharge Machining (EDM)	<i>Kato, Hideki</i>	83
3.1	Principle		83
3.2	Advantages and disadvantages		83

3.3	Processing accuracy		83
3.4	Process and practice		84
3.5	History and progress		85
6.4	Injection Molding		86
		<i>Niwayama, Shigeki/ Ogata, Toshio</i>	
4.1	Principle		86
4.2	Introduction of high-performance injection machines		86
4.3	Progress and automatization of molding processes		87
4.4	Practice for efficient production		88
4.5	Typical difficulties and solutions in injection molding		89
4.6	Recent improvements		90
	(Mini-column) Sekisui Kinzoku Sakado Factory		91
6.5	Development of Spoke Wheel with Electric Contacts for JNR Steam Locomotive Type C12		92
		<i>Shimizu, Masahiro</i>	
5.1	Problems to be solved for the development of the small tank steam locomotive		92
5.2	Modification of leading wheels used in existing locomotives		92
5.3	New development of spoke wheels with electric contacts		93
5.4	Machining and stamping required for fabrication		94
5.5	Application of new wheels to small steam locomotive		95
5.6	Process of development		95
	(Column) Development of Leading Wheels with Spokes		96
		<i>Shimizu, Masahiro</i>	
6.6	Details of Punching Spoke Wheels		97
		<i>Kobayashi, Makoto</i>	
6.1	Subjects for successful processing		97
6.2	Problems in existing processing technique		97
6.3	A new technique for the design of parts feeder		98
6.4	Application to products		98
6.7	Development of Motors		99
		<i>Yamazui, Shinichi</i>	
7.1	Early single-axis motors		99
7.2	Introduction of the dual-axis motor		99
7.3	Motor downsizing		100
7.4	New small motor with large torque		101
7.5	Development of ultracompact motor		102
	(Column) Confirmation of Parts Assembling on the Design Drawing - an Example of C12 Drive Unit -		103
		<i>Shimizu, Masahiro</i>	
6.8	Painting and Printing		104
		<i>Kouno, Kazuhiro/ Seki, Ryotaro</i>	
	(Mini-column) Sekisui Kinzoku Saitama Factory		104
8.1	Painting		104
8.2	Printing		105
8.3	Hot stamp		106
8.4	Recent developments in paint and printing technology		106
8.4.1	Color separation technique		106
8.4.2	Reproducing the look of stainless steel		106
8.4.3	Printing of details		107
8.4.4	Improvement of quality by the combination of painting technologies		107
6.9	Examples for the Assembly Process - Improvements in Body Structure and Attachment of Trucks -		108
		<i>Kouno, Kazuhiro</i>	
9.1	Assembly concept		108
9.2	History of truck assembly methods		108
6.10	History and Benefits of Body Suspension System Developed for Model Trains		110
		<i>Kunitake, Terumi</i>	
10.1	Early application of suspension structure		110
10.2	Component parts of suspension mechanism		110
10.3	Improvement of electrical current collection and running performance by suspension mechanism		110
10.4	Addition of pendulum mechanism		111
10.5	Story of the invention of the suspension mechanism		111
6.11	History of KATO Truck-mounted Couplers		112
		<i>Yabuki, Takashi</i>	
11.1	Background		112
11.2	Early development of the new coupler and its problems		112
11.3	Development of new couplers		113

**Chapter 7. DEVELOPMENT OF N-GAUGE MODELS IN THE PAST 50 YEARS  
– MEMORABLE PRODUCTS –**

7.1	JNR Series KIHA20 diesel cars	
	– The first item to have Expanded the N-gauge Market in Japan and Broadened the Dreams of Users –	116
7.2	JNR Type C11 steam locomotive	
	– A New Item which had been Desired by Many N-gauge Users –	117
7.3	JNR Series KIHA82 Diesel Cars for Limited Express Trains	
	– Established the Basic Structure for KATO N-gauge Rolling Stock, One which is in Use Even Today after 10 Years Evolution Since 1965 –	117
7.4	JNR DD13 Diesel Locomotive	
	– The Pursuit of High Quality Despite the Difficulties due to Its Small Size –	118
7.5	JNR EF65 1000 Direct-current Electric Locomotive and Series 24 Type 25 Sleeping Cars	
	– Contributed to the Popularization of N-gauge Models by Capitalizing on Social Attention of the "Blue Train" in the Late 1970's –	118
7.6	JNR Series 14 Passenger Cars "Salon Express Tokyo"	
	– A New Production of Prototypes Started from a "Joyful Train" Blossomed on the Eve of the Organization Change from JNR to JR –	119
7.7	JNR type EF81 Universal Electric Locomotive	
	– Drastic Improvement of Running Performance through Built-in Fly Wheels in a Drive Unit –	119
7.8	Series E351 Electric Train for Limited Express	
	– Reproduction of the Pendulum System by Passive Mechanisms Developed for N-gauge Trains –	120
7.9	Series E2 "Shinkansen" Electric Train	
	– Reproduction of "Open-nose Coupler" in N-gauge –	120
7.10	Toyama Light Rail TLR0600	
	– Innovative Technologies for N-gauge Drive Units Applied to a Tram as a New Urban Transportation Vehicle –	121
7.11	Series E5, E6 and E7 "Shinkansen" Electric Trains	
	– The Representative "Shinkansen" Operated Today by the East Japan Railway Company –	121
7.12	Series E655 Universal Electric Train with a Coach for Distinguished Guests	
	– A Special Model Produced with Newly Developed Painting Technology –	122
7.13	Trains of RhB in Switzerland	
	– World Famous Trains Surpass National Boundaries as Models –	122
7.14	Old Electric Trains Operated in "Iida line"	
	– The Joy of "Old and New" Heroes Returning from the Past –	123
7.15	JNR Type C12 Steam Locomotive	
	– The History of Model Steamers is the History of the Evolution of New Motors –	124
7.16	JNR Type C59 Steam Locomotive and Express Night Train "Aki" Composed of Series 10 Sleeping Cars	
	– Defining the Improvements in Specifications and Quality for N-gauge Models over the Last 50 years –	124
7.17	UNITRACK	
	– The Ready-to-Assemble Track System for Easy Operation of N-gauge Trains –	125
7.18	UNITRACK Double Track System	
	– A New System for Matching the Reality of the Rails and the Needs of Current Day Modelers –	125
7.19	UNITRAM Street Track System	
	– The Challenges of Realistic Tram Operation –	126
7.20	Motorized Turntable	
	– A Perfect Balance between Realistic Appearance and Reliable Operation –	126
7.21	Sound Box System	
	– Expanding the Joy of Model Railroading by Easy Implementation of Sound –	127

**Chapter 8. KATO'S ACTIVITIES IN SPREADING THE WORD OF N-GAUGE**

8.1	Production of PA-1 and Starting of Business in the US	
		Kato, Hiroshi & editorial committee
1.1	History to production of the N-gauge PA-1	128
1.2	PA-1 ensuring reliability in "SEKISUI" products	129
1.3	Further development after PA-1	130
8.2	Memoir of Exhibition in Nürnberg over 30 Years	131
		<i>Kato, Hiroshi</i>
8.3	Establishment of KATO USA, Inc. and the Unparalleled "KATO Drive"	134
		<i>Kato, Hiroshi</i>
8.4	Memories of the Seikisui Kinzoku Showroom	136
		<i>Seki, Masahiro</i>
8.5	Attempt to Produce the Swiss "Glacier Express"	139
		<i>Seki, Ryotaro</i>
8.6	JAM Convention, Model Rail Contest, T-TRAK	143
		<i>Kato, Hiroshi</i>
8.7	Acknowledgment of the Honor of being inducted to the Hall of Fame	146
		<i>Kato, Hiroshi</i>

**Chapter 9. THE ORIGIN OF N-GAUGE MODEL TRAINS AND EARLY PRODUCTS BY SEKISUI KINZOKU 148***Ohta, Haruhiko*

9.1 Early Models in the World with Sizes Similar to N Scale	148
1.1 Before 1960	148
1.1.1 Attempts to produce small railroad models similar to N Scale	148
1.1.2 Lone Star Locos	149
1.1.3 Minitrix push model "Schiebetrax"	151
1.2 The early 1960's	151
1.2.1 The first established system of electric models in N-gauge, "Treble-O-Lectric" in England	151
1.2.2 Arnold "rapido 200" in West Germany leading the development of N-gauge	153
1.2.3 Development of American models by Arnold	154
1.2.4 Establishment of "N Scale"	155
1.2.5 Motorized Minitrix and trial by Märklin	156
1.2.6 A new manufacturer "Piko" in East Germany	156
1.3 Before 1965 in Japan and "Sony Microtrain"	157
9.2 Development of N-gauge Trains by Sekisui Kinzoku	158
2.1 Outline of early models	158
2.1.1 Proposed definition of early models	158
2.1.2 The first items of JNR C50 and OHA 31 as memorial models	159
2.1.3 JNR Series 103 electric commuter train in various colors	160
2.1.4 Early models of EF70, JNR alternative-current electric locomotive	161
2.1.5 Early model of EF65 500, JNR direct-current electric locomotive	161
2.1.6 Other early models	162
2.1.7 Early track system	162
2.1.8 Packaging of early items	162
2.1.9 Early catalogs and promotional materials	164
2.2 Japanese-prototype models in US color schemes	165
9.3 Existing Early Couplers for N-gauge Trains in the World and Their Unification	165
3.1 Tin coupler by Arnold	165
3.2 Couplers of early motorized Minitrix and early Piko models	166
3.3 Couplers by early Lima and Tibidabo models	167
3.4 Unification of N-gauge couplers	168
3.5 Couplers by early Aurora compatible with early Sekisui	168
9.4 N-gauge Trains in East Germany and Spain	168
4.1 N-gauge trains of prototypes in Eastern Europe produced by Piko in East Germany	168
4.2 "3N" system with an additional line for electric supply developed by Ibertren in Spain	169
9.5 Looking Back the Investigation of Early Models and Acknowledgment	170
References	171
